REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the postoffice.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall for the preceding 12 months will be carried in the June issue of this bulletin.

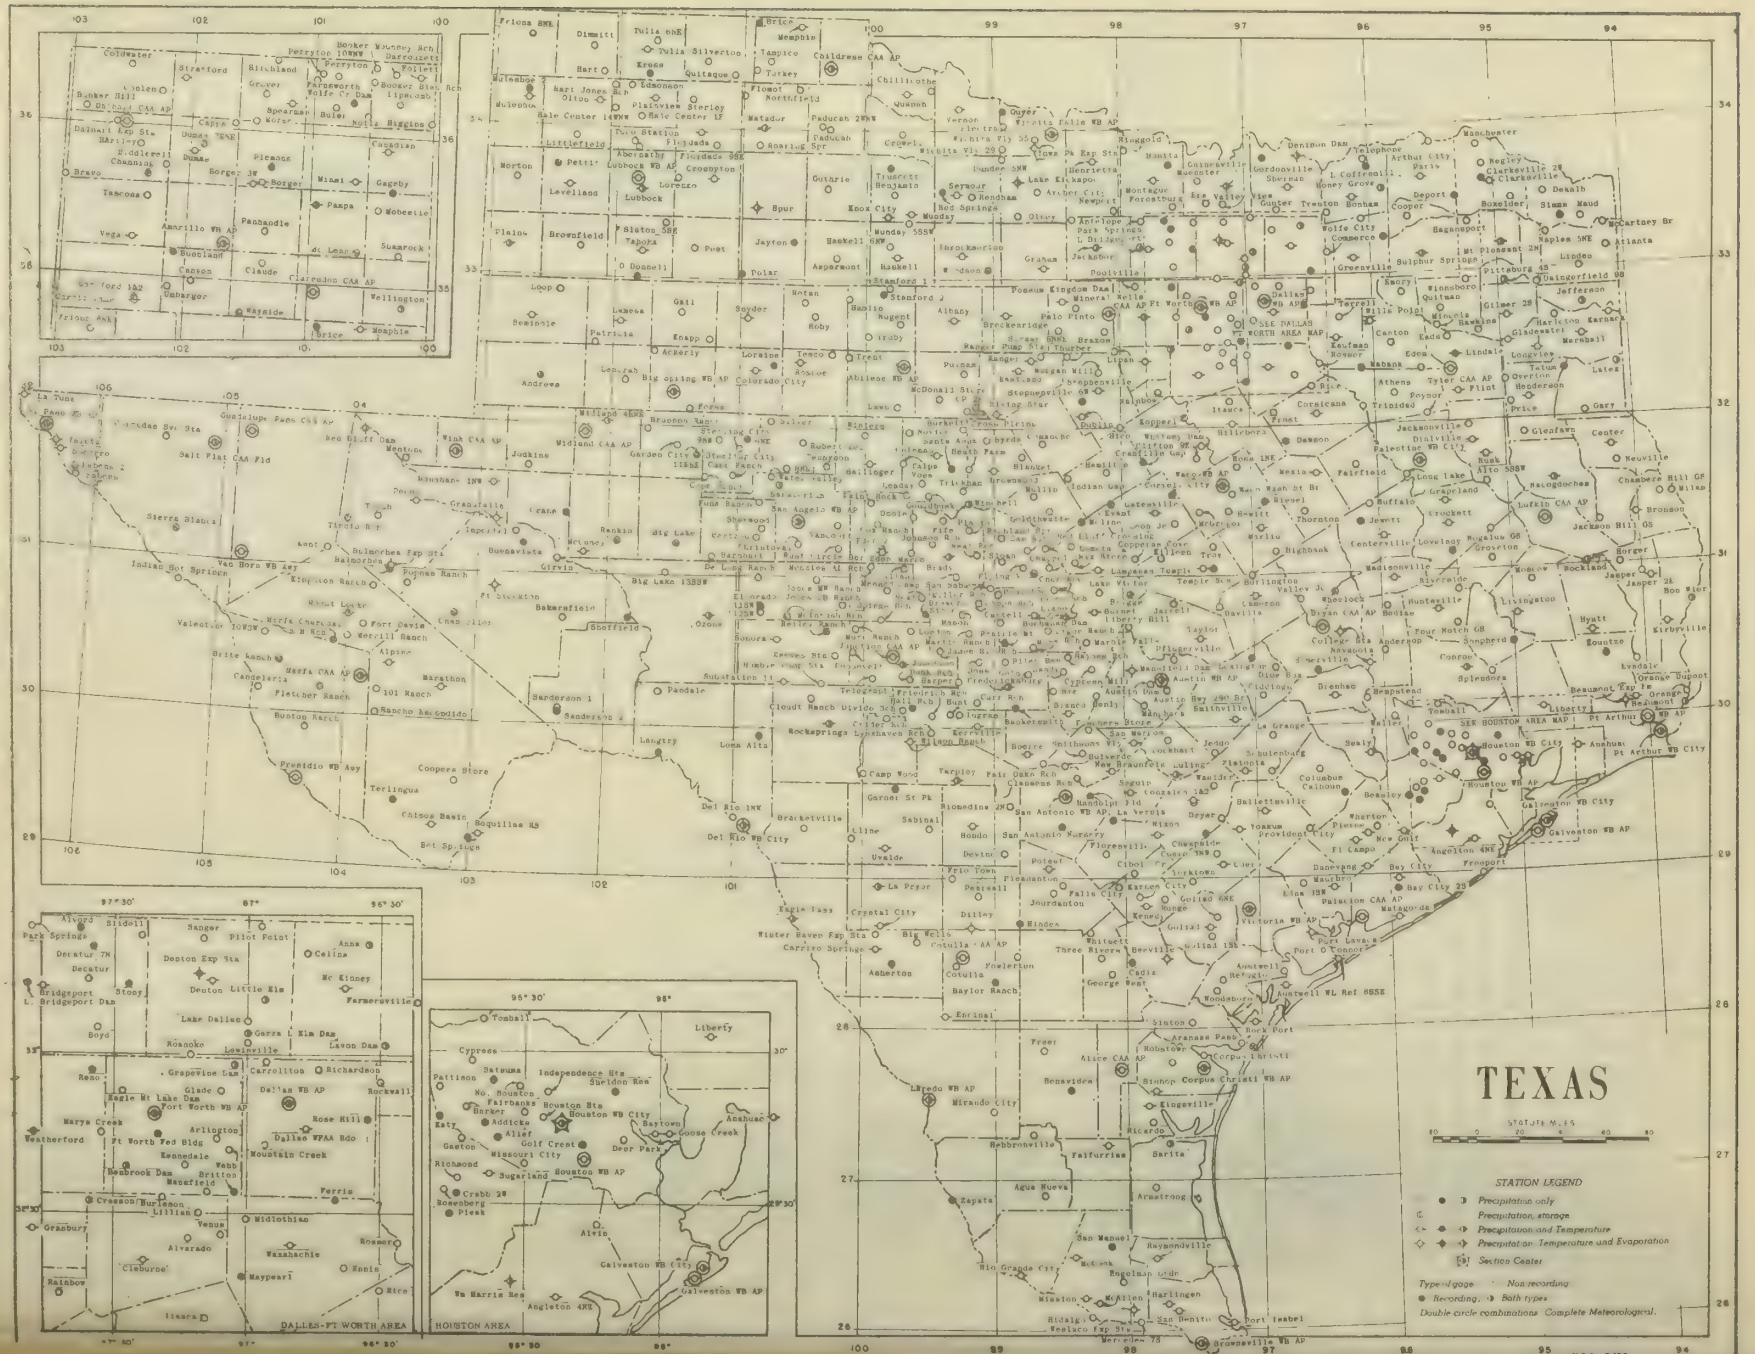
Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches, and wind movement in miles. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 4 are from recording gages. Traces are not shown.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.



Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830 C.S.T.

-	No record in Tables 3, 4, 6, 7 and the Station Index. No record in Tables 2 and 5 is indicated by no entry. When hourly precipitation is missing or accumulated for several days, only the first and last days are shown in Table 4.
+	And also on a later date or dates.
*	Amount included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
6	Station not equipped with a recording gage. See Table 4 for 6-hourly measured amounts.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record.
R	Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages.
T	Trace, an amount too small to measure.
Y	Includes total for previous month.
SS	This entry in time of observation column in Station Index means observation made near sunset.

Subscription Price: 15 cents per copy; monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks, postal notes and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Weather Records Processing Center, 811 Fidelity Building, Kansas City 6, Missouri.

CLIMATOLOGICAL DATA

TEXAS

SEPTEMBER 1950

Volume LV No. 9

KANSAS CITY: 1950

TEXAS - SEPTEMBER, 1950

E. A. Farrell, Section Director - Houston

WEATHER SUMMARY

Temperatures during the month averaged below normal in the northwestern and north-central portions of the State and were near to slightly above normal elsewhere, except 3-4° above normal in the extreme south. Rainfall was plentiful over most of the State, except in the extreme southern and coastal areas where amounts averaged well below normal.

As the month began, there were showers and thunderstorms scattered over most of the State, although precipitation was light in most areas. The major effect of the showers was to lower the daytime temperatures. Most stations recorded their monthly minimum temperatures on the 7th or 8th. Effective rains continued in most sections until the 26th, although the extreme southern areas remained dry. The last week was generally sunny over most of the State. The greatest precipitation in 24 hours was 7.84 inches at Jefferson on the 17th. The greatest monthly amount of precipitation was 13.70 inches at Jefferson. Monthly maxima temperatures occurred at most stations from the 10th to the 16th. The highest temperature in the State was 106° at Carrizo Springs on the 10th and at Falfurrias on the 12th. The lowest temperature in the State was 44° at Muleshoe on the 16th. The temperature range within the State was 65°.

Drilling the 1951 wheat crop was delayed in the important High Plains area during the middle half of the month, but was rushed to completion during the last week of open weather. Harvest of the comparatively small cotton crop made good progress, but excessive rains caused additional delays and continued deterioration in crop prospects in northern areas. Matured corn in northern counties was further damaged by excessive rains. Most of the crop in central and southern areas has been harvested. Tomatoes and other fall vegetable crops in the Winter Garden-Laredo-Eagle Pass areas made good progress under favorable moisture and temperature conditions. The Coastal Bend continued critically deficient in moisture for early winter vegetable planting. A lush supply of green range and pasture feed continued available in northern and northwestern counties. Heavy rains in Trans-Pecos and Plateau Counties will soon start winter grass and weeds.

LOCAL STORMS

On the 11th, hailstorms were reported from Floyd and Lynn Counties. Near Floydada, about 80% damage to cotton and 50 to 80% damage to grain crops was experienced. About 10 miles east of Tahoka, hail damaged about $12,500 worth of cotton. Lightning fired one 55,000 barrel oil storage tank which was valued at $50,000 at Midland, Midland County, on the 14th.

FLOODS

It is unusual for major flooding to occur in September, which is considered as one of the drier months of the year. Moderate flooding occurred in the upper Trinity basin from Dallas to Trinidad due to excessive rains from the 3rd to 5th and again from the 13th to 19th. Minor flooding occurred in the upper Sabine basin at Mineola from heavy showers near the middle of the month. Excessive rains on the 16th near Jefferson caused unusually high water in the small tributaries of the lower Cypress, and flooded streets and homes in Jefferson. Excessive rains on the 13th and 14th caused extensive flooding along the Sulphur River at Hagansport and Naples.--CBC

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages --mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimatic Network stations were presented in bulletins (Hydrologic Bulletins) which were issued monthly for each of 8 drainage areas embracing the entire United States, but since the Network was established to meet the internal requirements of the Federal agencies referred to above, no provision was made for public dissemination of the data, distribution being limited to cooperating agencies and to certain public repositories. A list of locations where reference copies of the Hydrologic Bulletin Series are available for inspection may be obtained upon application to Chief, U. S. Weather Bureau, Washington 25, D. C.

Many other records published in this bulletin have been made available through the cooperation of various public offices, private agencies, and individuals as listed in the Station Index.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall for the preceding 12 months will be carried in the June issue of this bulletin.

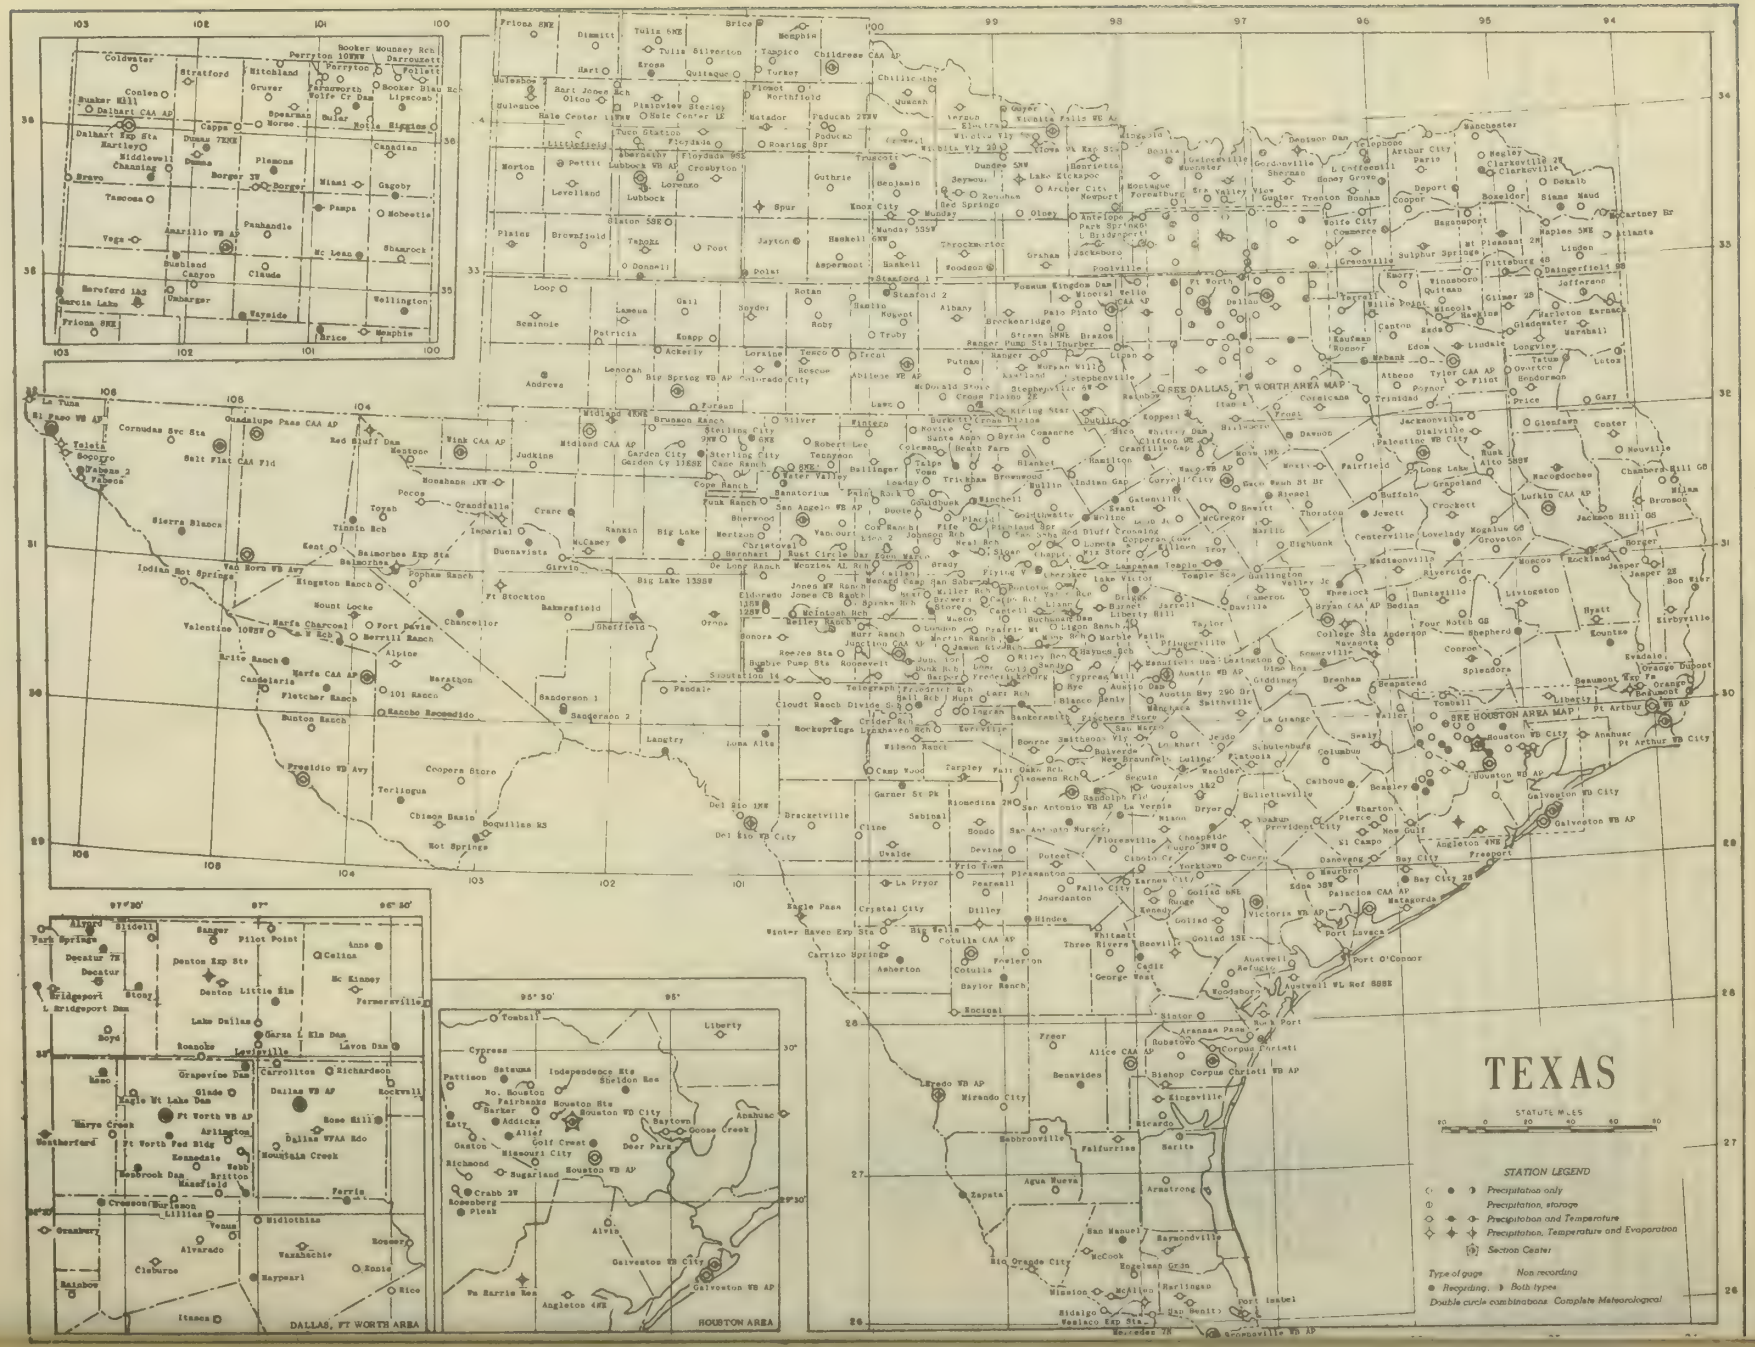
Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F, precipitation and evaporation in inches, and wind movement in miles. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 4 are from recording gages. Traces are not shown.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.



Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830 CST.

-	No record in Tables 3, 4, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. When hourly precipitation is missing or accumulated for several days, only the first and last days are shown in Table 4.
+	And also on a later date or dates.
*	Amount included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
6	Station not equipped with a recording gage. See Table 4 for 6-hourly measured amounts.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
SS	This entry in time of observation column in Station Index means observation made near sunset.

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks, postal notes and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Weather Records Processing Center, 804 Fidelity Building, Kansas City 6, Missouri.

KANSAS CITY: 1950

TEXAS - OCTOBER, 1950

E. A. Farrell, Section Director - Houston

WEATHER SUMMARY

October was unusually warm and dry. Mean temperatures were well above normal in all sec-
tions of the State, ranging up to 8-9° above normal in the Amarillo and El Paso areas. I
was one of the warmest Octobers of record at several stations, and the warm spell near th
end of the month was record-breaking for so late in the season over much of the State. Pre-
cipitation in all sections, except the extreme west, was considerably below normal. Thi
was the fourth consecutive month of sub-normal precipitation near the Coast and in the extrem
south. The accumulated deficiency in the Corpus Christi-Victoria area is now as much as 1
inches less than normal.

It was warm at the beginning of the month, with Ballinger having the highest temperature fo
the month, which was 99° on the 1st. McCook also observed 99° on the 23rd. A change t
cooler weather moved into northern Texas on the 2nd. The greatest precipitation in 24 hour
occurred at San Benito on the 3rd, which had 5.00 inches of rain as a result of a tropica
squall which ran inland into Mexico on the 4th. Most stations recorded the lowest tempera
ture for the month on the 9th and 10th, when many stations had the coolest so far this season
From the 10th to 16th, dry, sunny weather prevailed with warm days and cool nights. Ligh
to moderate rains occurred in the northeast quarter of the State from the 18th to the 23r
as part of general Gulf coast rains accompanying a tropical disturbance in the Gulf. Th
lowest temperature for the month was 33° at Miami on the 23rd. The balance of the month wa
dry and warm, except for a few showers in the immediate coastal areas over the week end o
the 29th. The greatest monthly precipitation was 5.18 inches at San Benito. The temperatur
range within the State was 66°.

Limited cotton harvest was starting in north central and northeastern counties where man
weeks of rain had delayed maturity. The lower Rio Grande Valley vegetable areas finally go
good rains that were very beneficial to growing crops and stimulated grower interest i
planting hardy type vegetables for winter harvest. Oranges and grapefruit continued to mov
in light volume from the Lower Valley, size restrictions being a factor in limiting harvestin
operations. Digging of east Texas sweet potatoes continued. Combining of rice continue
with the late varieties maturing rapidly! Land preparation and flax seeding was delayed b
continued dry weather in the Coastal Bend, Karnes and other southern flax areas. All classe
of livestock were doing well on the generally plentiful range and pasture grass.

No severe storms were reported during the month.--CBC

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages --mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimat Network stations were presented in bulletins (Hydrologic Bulletins) wh were issued monthly for each of 8 drainage areas embracing the entire Unid States, but since the Network was established to meet the internal requi-ments of the Federal agencies referred to above, no provision was made f public dissemination of the data, distribution being limited to cooperatg agencies and to certain public repositories. A list of locations where r-erence copies of the Hydrologic Bulletin Series are available for inspectn may be obtained upon application to Chief, U. S. Weather Bureau, Washingn 25, D. C.

Many other records published in this bulletin have been made available throb the cooperation of various public offices, private agencies, and individus as listed in the Station Index.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall for the preceding 12 months will be carried in the June issue of this bulletin.

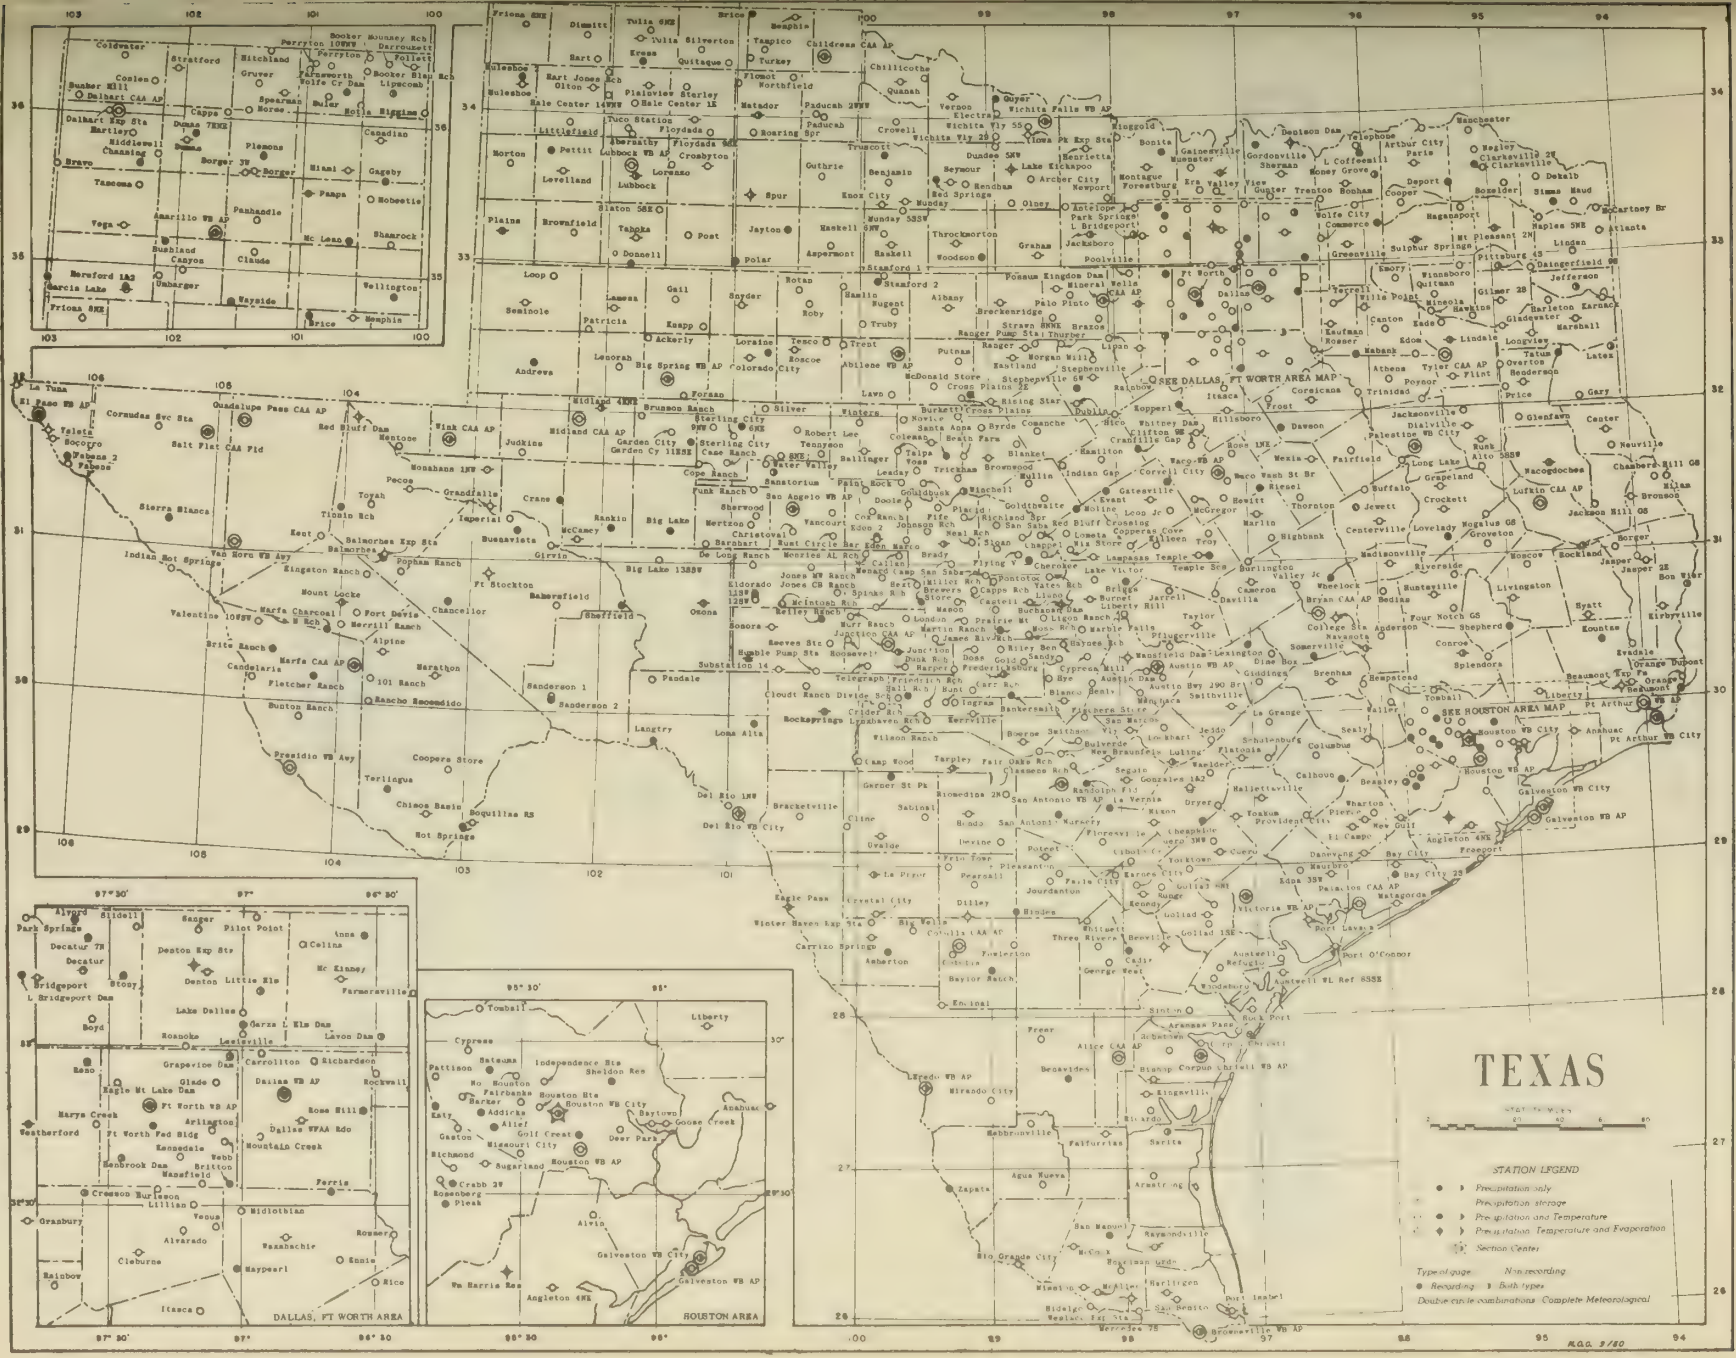
Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F, precipitation and evaporation in inches, and wind movement in miles. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 4 are from recording gages. Traces are not shown.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.



Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830 CST.

-	No record in Tables 3, 4, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. When hourly precipitation is missing or accumulated for several days, only the first and last days are shown in Table 4.
+	And also on a later date or dates.
*	Amount included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
6	Station not equipped with a recording gage. See Table 4 for 6-hourly measured amounts.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
SS	This entry in time of observation column in Station Index means observation made near sunset.

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks, postal notes and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Weather Records Processing Center, 804 Fidelity Building, Kansas City 6, Missouri.

CLIMATOLOGICAL DATA

TEXAS

NOVEMBER 1950
Volume LV No. 11

THE LIBRARY OF THE
MAR 22 1951
UNIVERSITY OF ILLINOIS

KANSAS CITY: 1951

TEXAS - NOVEMBER, 1950

E. A. Farrell, Section Director - Houston

November was unusually dry in all sections of the State. Drought conditions were widespread and severe over much of the State by the end of the month. Temperatures during the month averaged above normal in most southern and western localities and near or a little below normal in the central and northeastern portions of the State. A cold spell on the 10th and 11th brought a killing freeze to all the State except the coastal areas. Since 1888 only two Novembers have been drier, in 1903 and in 1949.

An abrupt change from summer temperatures to fall temperatures accompanied a dry norther which brought freezing temperatures to the northwest third of the State on the 2nd and 3rd. Most stations reported their highest temperature for the month on the 1st. After a few days of rising temperatures, another outbreak of cold air moved downstate on the 10th and 11th, which was the coldest for so early in the season at many stations. The lowest temperature for the month was 4° at Dalhart Experiment Station on the 10th, while most stations reported their lowest for the month on the 11th. Light to moderate showers occurred in southern Texas from the 13th to the 20th. The greatest precipitation in 24 hours was 3.18 inches at Fair Oaks Ranch on the 14th. Temperatures began climbing on the 15th and reached a climax on the 19th when the highest for the month, 95°, was reported at Carrizo Springs and at Rio Grande City. Another cold spell brought freezing temperatures to many stations on the 24th and 25th. The greatest precipitation for the month was 5.27 inches at Bronson.

Freezing temperatures penetrated on the 11th and 12th into the Eagle Pass and Winter Garden areas and to a line extending northeastward about 100 miles from the coast. Damage to crops from this freeze was negligible except to tender vegetables in the Winter Garden and Eagle Pass sections. The Laredo section escaped the freeze of the 25th, for the third time this fall, avoiding disaster to the tomato crop in that area. Rain was needed in all parts of the State to bring on winter vegetation and improve pastures.

LOCAL STORMS

On the 3rd, a windstorm, which accompanied a line squall, damaged power poles and trees and unroofed a section of the Veterans of Foreign Wars clubhouse at Port Neches, Jefferson County. Damage was estimated at $4,000.--CBC

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages --mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimat Network stations were presented in bulletins (Hydrologic Bulletins) wh were issued monthly for each of 8 drainage areas embracing the entire Unit States, but since the Network was established to meet the internal requir ments of the Federal agencies referred to above, no provision was made f public dissemination of the data, distribution being limited to cooperati agencies and to certain public repositories. A list of locations where re erence copies of the Hydrologic Bulletin Series are available for inspect may be obtained upon application to Chief, U. S. Weather Bureau, Washingt 25, D. C.

Many other records published in this bulletin have been made available throu the cooperation of various public offices, private agencies, and individua as listed in the Station Index.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of number within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F, precipitation and evaporation in inches, and wind movement in miles. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 4 are from recording gages. Traces are not shown.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830 CST

- No record in Tables 3, 4, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. When hourly precipitation is missin or accumulated for several days, only the first and last days are shown in Table 4.
+ And also on a later date or dates.
* Amount included in following measurement, time distribution unknown.
// Gage is equipped with a windshield.
6 Station not equipped with a recording gage. See Table 4 for 6-hourly measured amounts.
B Adjusted to a full month.
E Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages.
T Trace, an amount too small to measure.
V Includes total for previous month.
SS This entry in time of observation column in Station Index means observation made near sunset.

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks, postal notes and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Weather Records Processing Center, 804 Fidelity Building, Kansas City 6, Missouri.

W.B.O., Kansas City, Mo. -- 1-19-51 -- 182

CLIMATOLOGICAL DATA

TEXAS

DECEMBER 1950
Volume LV No. 12

THE LIBRARY OF THE
MAR 12 1951
UNIVERSITY OF ILLINOIS

KANSAS CITY: 1951

TEXAS - DECEMBER, 1950

E. A. Farrell, Section Director - Houston

WEATHER SUMMARY

Drought conditions continued in all sections of the State during December, and were severe in the South-Central and Upper Coast sections. The Corpus Christi-Victoria area has been dry for eight consecutive months. Since 1888 only two Decembers have been drier, in 1889 and in 1917. Temperatures averaged above normal during the month in most southern and western areas, and were a little below normal in the northeastern portion and along the Red River.

Most stations recorded their highest temperature for the month on the 1st. The highest temperature in the State was 95° at McAllen on the 1st. The outstanding feature of the month's weather was the severe cold that prevailed on the 6th and 7th. Many stations had the coldest weather ever known this early in winter. Freezing temperatures extended to the coastal areas and the Lower Rio Grande Valley. The lowest temperature in the State was 4° below zero at Muleshoe on the 6th. Although the month was dry in all sections, a few showers occurred in the northeast section during the first half, while light snow fell in the Panhandle, and light to moderate rains fell in the upper coastal section during the last half. Because of the continued drought, grass and brush fires occurred in all sections. The greatest precipitation for the month was 4.91 inches at Orange.

Development of small grains and winter cover crops was at a practical standstill as critical droughty conditions continued. Except in the northwest crops were out of the fields and the soil in all areas was too dry for fall plowing. Farm work was stopped abruptly except for necessary attention to livestock as the severely cold weather whipped across the State on the 5th and 6th. Below-freezing temperatures in the Lower Valley on the 6th and 7th brought the 1950 fall tender vegetable crop to a close earlier than usual. Unprotected livestock suffered in the cold temperatures; however, loss of flesh was not heavy because of the short duration of very low temperatures. Feeding was stepped up on many farms and ranches to offset the effects of the low temperatures.

No severe storms were reported during the month.--CBC

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages --mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimatic Network stations were presented in bulletins (Hydrologic Bulletins) which were issued monthly for each of 8 drainage areas embracing the entire United States, but since the Network was established to meet the internal requirements of the Federal agencies referred to above, no provision was made for public dissemination of the data, distribution being limited to cooperating agencies and to certain public repositories. A list of locations where reference copies of the Hydrologic Bulletin Series are available for inspection may be obtained upon application to Chief, U. S. Weather Bureau, Washington 25, D. C.

Many other records published in this bulletin have been made available through the cooperation of various public offices, private agencies, and individuals as listed in the Station Index.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F, precipitation and evaporation in inches, and wind movement in miles. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 4 are from recording gages. Traces are not shown.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830 CST.

-	No record in Tables 3, 4, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. When hourly precipitation is missing or accumulated for several days, only the first and last days are shown in Table 4.
+	And also on a later date or dates.
*	Amount included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
6	Station not equipped with a recording gage. See Table 4 for 6-hourly measured amounts.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
SS	This entry in time of observation column in Station Index means observation made near sunset.

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks, postal notes and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Weather Records Processing Center, 804 Fidelity Building, Kansas City 6, Missouri.

CORRECTIONS

April 1950, Farmersville, Table 3, 29th should be .10, 30th .18, and total 5.04.

June 1950, Glenfawn, Table 3, 1st should be .50, 2nd .65, 19th 0, 21st T, and total 5.74.

Hot Springs, Table 3, 22nd should be .35 and 24th 0.

Hot Springs, Table 4, delete entries on 24th and add precipitation on 22nd as follows: noon .05, 1P .01, 2P .01, 3P .18, 4P .08, 5P .02, and total .35.

July 1950, General Summary, 2nd paragraph, 10th line, date of the highest temperature (108° at Llano) should be 29 instead of 30.

Buchanan Dam, Table 3, delete "R" as this is the standard gage record.

Cheapside, Table 4, on 17th enter dashes 1A through midnight and dash total. Delete dashes on the 31st.

Cranfills Gap, Table 4, delete dashes on 17th and 31st and add .35 at 11A of the 24th and total of .35. Add dashes on 1A through midnight on 25th.

Decatur 7 N, Table 4, on 27th delete dashes 7P through total and add total of 1.07. Delete dashes on 31st.

Eagle Pass, Table 4, delete dashes on 30th and 31st and add on 31st .32 at 10P, .01 at 11P, .07 at midnight and total of .40.

Evant, Table 4, delete dashes on 27th and 31st.

Stamford 2, Table 4, delete dashes on 27th and add total of .40. Delete dashes on 31st.

Sanderson, Table 3, 11th should be 0 and 15th .06.

Sanderson, Table 4, delete precipitation on 11th and add on 15th: .05 at 6P, .01 at 7P, and total .06.

August 1950, Center, Table 2, mean temperature should be 81.2 and number of days maximum 90 or above 27.

Center, Table 5, add the following maximum temperatures: 6th 88, 9th 90, 12th 83, 19th 91, and mean 92.9.

Moline, Table 4, on 26th delete dashes 8P through midnight. On 27th add .10 at 10P, .06 at 11P, .09 at midnight, and total of .24. On 28th add .05 at 2A and total of .05. On 29th add .44 at 10P, .11 at 11P, .10 at midnight and total of .65. Delete dashes on 31st.

Santa Anna, Table 4, 15th, delete dashes 9A through midnight. On 30th, delete dashes 1A through 10A.

Woodson, Table 4, on 22nd delete dashes 3P through midnight and add total of .18. On 29th add 1.10 at 7P and total of 1.10. Delete dashes on 31st.

September 1950, General Summary, 2nd paragraph, line 8, temperature range within the state should be 62.

Table 1, lowest temperature should be 44.

Crosbyton, Table 2, greatest day of precipitation should be 1.34 on 18th, days with .01 or more 14, and days with .25 or more 7.

Crosbyton, Table 3, 3rd should be .34, 4th 1.29, 18th 1.34, 19th .02, 24th .08, 25th .11, 26th .55, and 27th 0.

Henrietta, Table 2, greatest day of precipitation should be 1.98 on the 6th.

Henrietta, Table 3, 5th should be .33 and 6th 1.98.

Livingston, Table 3, 15th should be .11 and 16th 0.

Snyder, Table 2, should be in Central Division rather than in Western Division as shown in April through August.

ANNUAL SUMMARY 1950

Volume LV No. 13

NAT.
HIST.

KANSAS CITY: 1951

TEXAS - 1950

E. A. Farrell, Section Director - Houston

WEATHER SUMMARY

The average temperature for the State for 1950 was 66.0° or 0.2° below normal. The highest temperature recorded during the year was 110° at Mansfield Dam on August 10th. The lowest temperature recorded during the year was -8° at Dalhart Experiment Station on January 4th. The average amount of precipitation was 25.17 inches or 5.08 inches below normal. Precipitation averaged below normal in all major divisions of the State, although stations in the Panhandle, north-central, northeast, and extreme eastern sections of the State had amounts which exceeded normal. The greatest excess occurred at Bonham, which had a departure of 15.26 inches above normal precipitation. The greatest precipitation in the year was 65.71 inches at McCartney Bridge, near Texarkana. The greatest amount in 24 hours was 13.90 inches at Galveston Airport on June 2nd-3rd, although an unofficial measurement of 17.30 inches was made at the Lazy S Ranch on Galveston Island during the same storm. The accumulated deficiency of precipitation caused a serious drought along the Texas coast and in the extreme southern portion of the State. The greatest deficiency occurred at Port Lavaca, which had a departure of 20.64 inches less than normal precipitation. The least annual precipitation in the State was 5.29 inches at Fabnes.

A very severe infestation of greenbugs, coupled with an extended fall and winter drought in northwest areas, resulted in the poorest wheat crop in a number of years. Oats and barley crops were also comparatively poor. Drought and recurring cool spells during March and early April delayed planting and early development of spring crops. Ample moisture and warm weather in most areas except the northwest and parts of south Texas during late April and May, however, permitted completion of planting and spring-planted crops, for the most part, were able to overcome the late start. Except in parts of south Texas, summer moisture was generally ample to excessive and spring-sown crops made good progress. Yields generally were below the high yields harvested in 1949, but were well above average. Peanut yields were the highest of record and rice yielded better than in any other year since 1940. Corn and sorghum grains also produced well, with yields exceeding those in all recent years except in 1949. Despite severe infestation of insects, which seriously damaged cotton over much of north and east Texas, that crop came through with yields which, except for 1949, had not been equalled since 1912.

SYNOPSIS BY MONTHS

JANUARY - The month was one of the warmest Januarys of record. Precipitation was below normal except in eastern and west-central areas. Minor flooding occurred along the Sabine, Sulphur, Cypress, Neches and Trinity Rivers.

FEBRUARY - Temperatures averaged above normal in all sections. This was the fourth consecutive month with above normal temperatures, making the winter of 1949-50 one of the mildest of record. Precipitation was above normal in the eastern and central portions, but was below normal elsewhere. Moderate flooding occurred in the Sabine, Sulphur, Cypress, Trinity, and Neches watersheds. A severe ice storm occurred in Northeast Texas from January 30th to February 1st, extending from Wichita Falls to Paris and as far south as Dallas and Fort Worth. A series of tornadoes in East Texas occurred on February 11th and 12th.

MARCH - The outstanding feature of March was the unusually dry weather which seriously accentuated the droughty conditions of previous months over western areas. Temperatures for March averaged above normal in the Western Division and extreme South Texas, but were below normal elsewhere. Precipitation during the month was mostly confined to the eastern third of the State during the first half of the month. Freezing temperatures, which extended as far south as San Antonio on March 13, caused some damage to fruit and gardens.

APRIL - Temperatures averaged 2-3° above normal in the extreme west, extreme south, and the Panhandle, and were 1-2° below normal in the north-central, south-central, northeast, and upper coastal areas. Elsewhere temperatures were seasonable. Although rains occurred in all sections, amounts in the western and extreme southern areas averaged less than normal with the moisture situation continuing critical. Rainfall was abundant elsewhere over the State, averagi considerably above normal in some sections, particularl along the upper coast.

MAY - Temperatures averaged considerably above normal a rainfall below normal in coastal, south-central, extre western and extreme northwestern portions of the Sta while elsewhere temperatures were near normal and rainfa above normal. Numerous severe storms occurred during t month.

JUNE - Temperatures averaged slightly below normal ov central, west-central, and southwestern portions, but we mostly normal to above elsewhere. Rainfall was above no mal in the Panhandle, the extreme northeastern and extre southern portions and near the upper coast. Local floodi occurred at Brownsville as a result of 7.52 inches of ra on the 2nd. More than 14 inches of rain at Galvest on the 2nd-3rd, with an unofficial measurement of 17. inches at the Lazy S Ranch on Galveston Island, produc considerable local flooding.

JULY - Temperatures averaged above normal over the e treme southern portion, but were below normal elsewher Precipitation was below normal over the southwestern a extreme southern portions and along the immediate coas but was considerably above normal in most other section While many localities in the northwestern and extre western portions were reporting near-record amounts rain, stations in the extreme southern portions were r porting unusually dry conditions. Locally heavy rains the 26th and 27th brought minor flooding to Dallas a Rockwall in the upper Trinity Basin.

AUGUST - Temperatures averaged above normal in coasta southwestern, and extreme western portions, but were bel normal elsewhere. Precipitation was above normal in t Panhandle and South Plains and in northeastern and loc areas of southwestern Texas, but was considerably bel normal in other sections. Coastal areas and the extre south continued critically dry.

SEPTEMBER - Temperatures averaged below normal in t northwestern and north-central portions and were near slightly above normal elsewhere, except 3-4° above norm in the extreme south. Rainfall was plentiful over mo of the State, except in the extreme southern and coast areas where amounts averaged well below normal. Modera flooding occurred in the upper Trinity Basin from Dall to Trinidad.

OCTOBER - October was unusually warm and dry. Mean te peratures were well above normal in all sections, rangi up to 8-9° above normal in the Amarillo and El Paso are It was one of the warmest Octobers of record at sever stations, and the warm spell near the end of the month w record-breaking for so late in the season. Precipitati in all sections except the extreme west was considerab below normal. This was the fourth consecutive month sub-normal precipitation near the coast and in the extre south. The accumulated deficiency in the Corpus Christ Victoria area was as much as 14 inches less than norm

NOVEMBER - November was unusually dry in all sections w drought conditions widespread and severe. Temperatu averaged above normal in most southern and western loca ties and near or a little below normal in the central northeastern portions of the State. A cold spell on 10th and 11th brought a killing freeze to the entire St except the coastal areas. Since 1888 only two Novemb have been drier, in 1903 and in 1949.

DECEMBER - Drought conditions continued in all sectio and were severe in the south-central and upper coast s tions. Since 1888 only two Decembers have been drier, 1889 and in 1917. Temperatures averaged above normal most southern and western areas, and were a little be normal in the northeastern portion and along the Red Riv The outstanding feature of the months weather was severe cold that prevailed on the 6th and 7th. Many s tions had the coldest weather ever known this early winter. Freezing temperatures extended to the coasta areas and the Lower Rio Grande Valley.--CBC

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages --mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimatic Network stations were presented in bulletins (Hydrologic Bulletins) which were issued monthly for each of 8 drainage areas embracing the entire United States, but since the Network was established to meet the internal requirements of the Federal agencies referred to above, no provision was made for public dissemination of the data, distribution being limited to cooperating agencies and to certain public repositories. A list of locations where reference copies of the Hydrologic Bulletin Series are available for inspection may be obtained upon application to Chief, U. S. Weather Bureau, Washington 25, D. C.

Many other records published in this bulletin have been made available through the cooperation of various public offices, private agencies, and individuals as listed in the Station Index.

See reference notes following Station Index.

RELOCATIONS OR CHANGES IN EXPOSURE OF INSTRUMENTS

Ackerly 3 SE: Rain gage moved 2 1/2 miles north-northeast of old site on December 28.

Athens: Rain gage moved 2 blocks west of old site on December 1.

Burlington: Rain gage moved 400 feet north and 1200 feet west of old site on November 10.

Channing: Rain gage moved 20 feet west of old site on July 26.

Cibolo: Rain gage moved 30 yards northwest of old site on March 1.

Cypress 1 SW: Rain gage moved 1 mile southwest of old site on May 23.

Devine: Rain gage moved 2 1/2 blocks southwest of old site on December 16.

Dialville 2 NW: Equipment moved 1.8 miles north of old site on August 14.

Dumas: Equipment moved 1/2 block north of old site on June 5.

Falls City: Rain gage moved 175 feet south-southwest on May 20.

Floresville: Rain gage moved 2 blocks west and 1 block south of old site on September 29.

Floydada 12 SE: Rain gage moved 3 miles southeast of old site on May 1.

Fowlerton: Rain gage moved .3 mile south of old site on September 28.

Friona: Rain gage moved .1 mile west of old site on June 16.

Garcia Lake: Rain gage moved 3 miles north and 1 mile east of old site on October 25.

Harleton: Rain gage moved 200 feet northwest of old site on November 24.

Hereford 2 ESE: Rain gage moved 2.6 miles east of old site on June 15.

Indian Hot Springs: Rain gage moved 2 miles northwest of old site on March 23.

Jourdanton: Rain gage moved 700 feet southwest of old site on May 26.

Miami: Equipment moved 210 feet east of old site on March 19.

Mount Pleasant: Equipment moved 2.5 miles west-northwest of old site on November 21.

Muleshoe No. 2: Rain gage moved 75 feet northwest of old site on July 20.

Pilot Point: Rain gage moved 3 blocks west-southwest on August 8.

Red Bluff Dam: Equipment moved 300 yards north of old site on September 11.

Seminole: Equipment moved 1 1/4 miles northwest of old site on December 21.

Sierra Blanca: Rain gage moved 300 feet west of old site on March 23.

Sinton: Rain gage moved 1 block west of old site on June 24.

Sinton: Rain gage moved 600 feet south of former site on November 1.

Tomball: Rain gage moved 1800 feet northeast of old site on November 10.

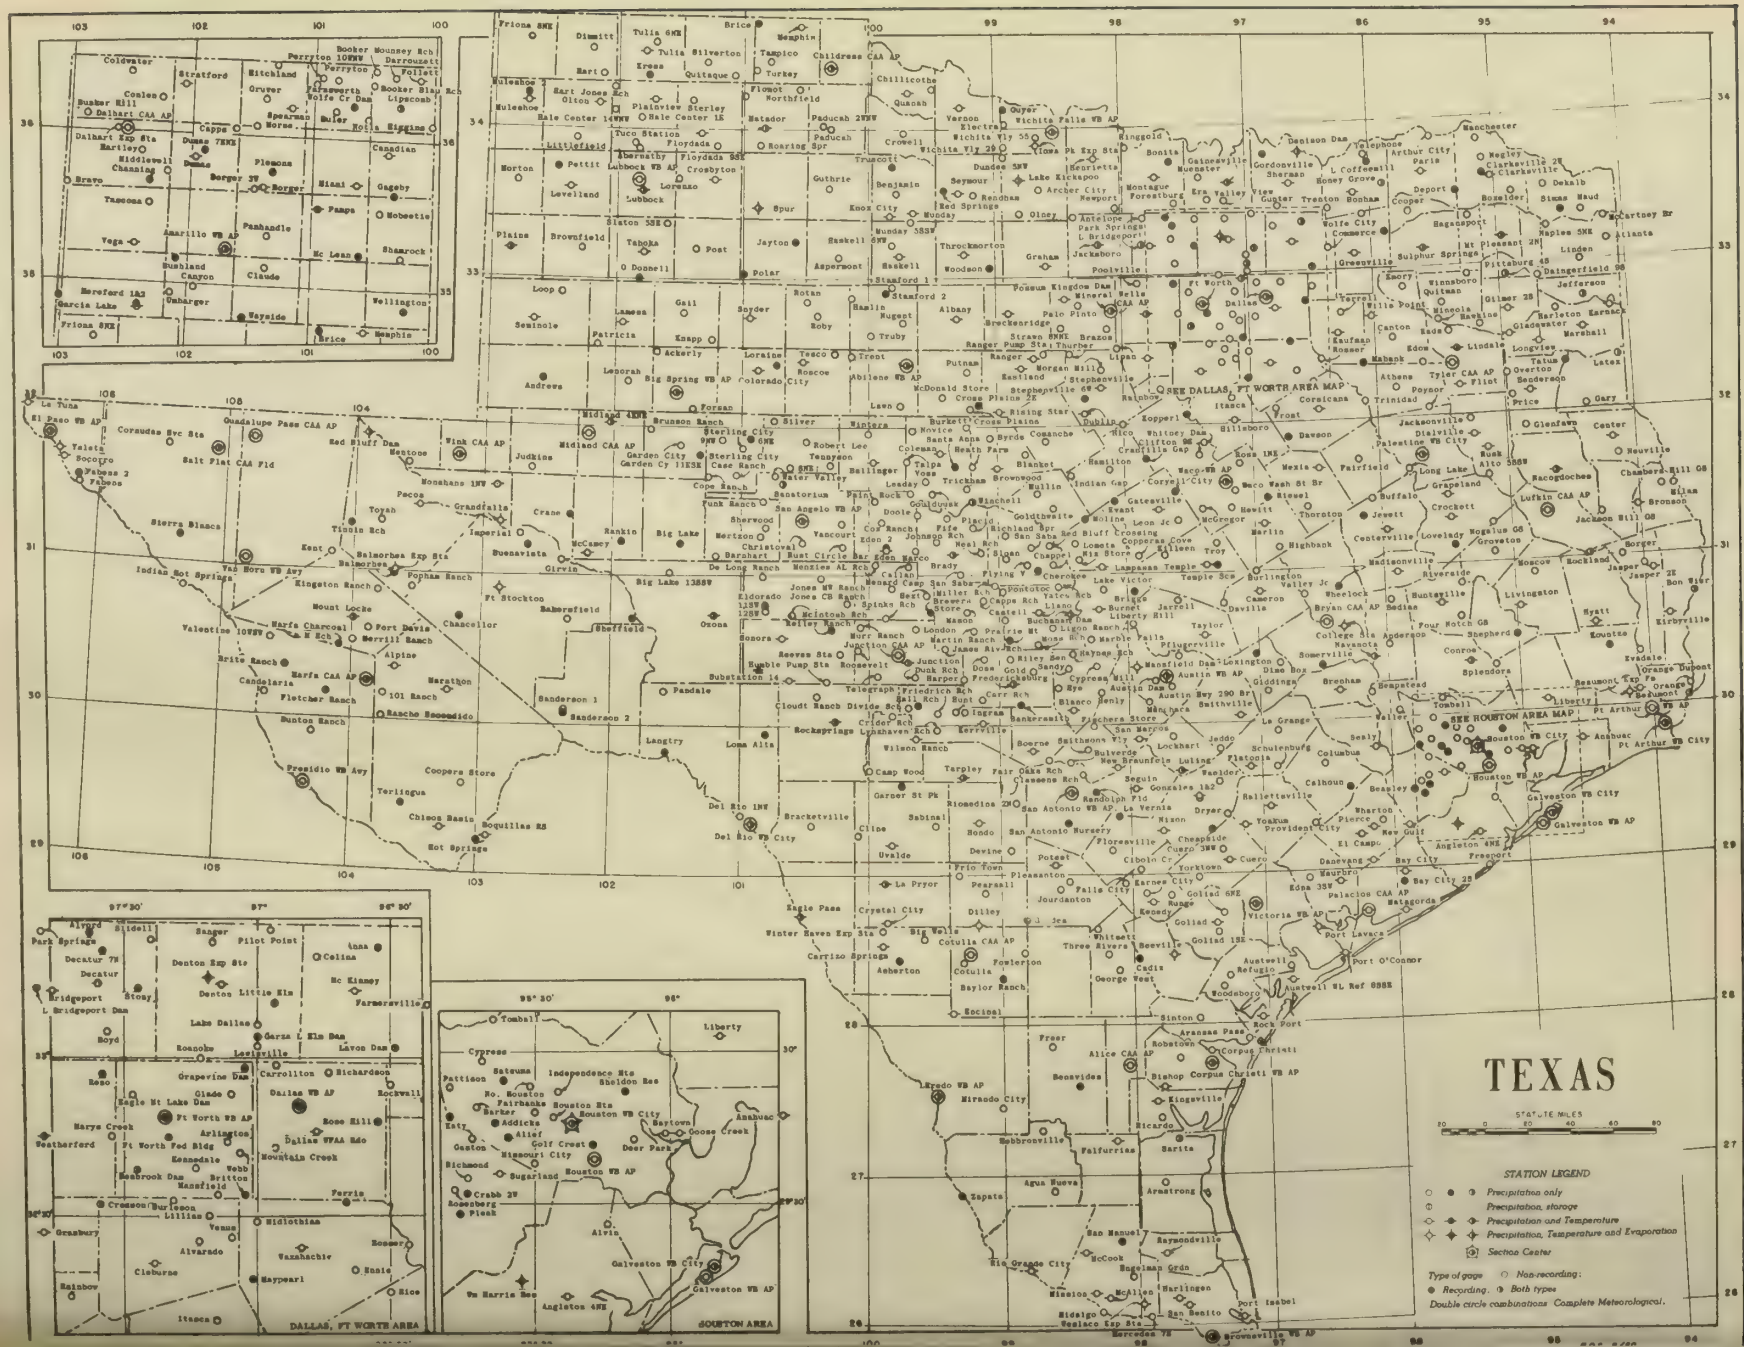
Trinidad: Rain gage moved 200 feet northeast of old site on November 3.

Whorton: Rain gage moved .5 mile south of old site on July 26.

REFERENCE NOTES

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F; precipitation and evaporation in inches, and wind movement in miles. Evaporation is measured on the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 4.

The four digit identification numbers in the Index are assigned on a state basis. There will be no duplication of numbers within a state.



Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried in the June and December issues of Climatological Data.

- \- No record.
- \+ Also later date (dates) or months.
- * Amount included in following measurement.
- // Gage is equipped with a windshield.
- B Adjusted to full month.
- E Water equivalent of snowfall wholly or partially estimated, using a ratio of 1 inch of water equivalent to every 10 inches of new snowfall.
- M 1 to 9 days' record missing; see monthly Climatological Date for detailed daily record.
- R Station equipped with a recording gage only.
- T Trace, an amount too small to measure.
- V Includes total for previous month.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks, postal notes and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

JANUARY 1951

Volume LVI No. 1

KANSAS CITY: 1951

TEXAS - JANUARY, 1951

E. A. Farrell, Section Director - Houston

WEATHER SUMMARY

Temperatures during January averaged below normal over the South Plains and in some southwestern areas, but averaged above normal elsewhere. A severe cold wave overspread the State between the 27th and 31st, however, extending into February. This cold wave, which was accompanied by freezing rain, sleet, and some snow, set new records for extended freezing weather over southeastern, extreme southern and central areas where considerable losses of cattle and damage to vegetation, power lines, and poles occurred. While precipitation during the month brought some relief to some upper coast sections, the intense drought of the last several months continued over most of the State.

Light rains fell in all sections during the first week, with effective rains in the northeast and along the upper coast. A cold wave moved into the State on the week-end of the 7th, which brought freezing temperatures to most of the lower Rio Grande Valley except Brownsville. In the second week some rain and snow fell in the northwest; rain also fell in the central section with effective rains in the northeast. Most stations recorded their highest temperatures for the month from the 18th to the 20th. The highest temperature in the State was 90° at Whitney Dam on the 18th. A brief cold wave on the 22nd brought freezing temperatures as far south as San Antonio. Warm, dry weather prevailed until the 27th when a severe "norther", which was accompanied by freezing rain, sleet, and some snow, moved downstate. Freezing temperatures occurred all the way to Brownsville and extended into February. Most stations recorded their lowest temperatures for the month from the 29th to the 31st. The lowest temperature in the State was 12° below zero at the Dalhart CAA station on the 31st. The greatest precipitation for the month was 9.07 inches at Jasper. The greatest 24-hour precipitation was 5.30 inches on the 7th at William Harris Reservoir. The intense drought of the last several months continued over most of the State, except along the upper coast where some relief came to some sections.

Dry soil over much of the State continued to hold up preparation of land for spring planting. Wheat in the northern High Plains, however, was greening up and showing signs of reviving following recent light snows. Also, in the northeast drought-breaking rains will now permit preparation of land and revive winter pastures. Along the upper coast where early January rains broke the drought, farmers were preparing land and winter legumes were germinating. All other areas still needed soaking rains. Heavy supplemental feeding of livestock continued in all areas but was expected to ease off soon in the limited areas where new feed has started.

LOCAL STORMS

In Beaumont on the 2nd at 8:30 P.M., a windstorm leveled a wood and sheet metal lumber storage building with damages at $500. A severe ice storm occurred in South Texas beginning on the 29th and continuing into February. Additional details will be given in the February notes.--CBC

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages --mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimatic Network stations were presented in bulletins (Hydrologic Bulletins) which were issued monthly for each of 8 drainage areas embracing the entire United States, but since the Network was established to meet the internal requirements of the Fedoral agencies referred to above, no provision was made for public dissemination of the data, distribution being limited to cooperating agencies and to certain public repositories. A list of locations where reference copies of the Hydrologic Bulletin Series are available for inspection may be obtained upon application to Chief, U. S. Weather Bureau, Washington 25, D. C.

Many other records published in this bulletin have been made available through the cooperation of various public offices, private agencies, and individuals as listed in the Station Index.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbe within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: temperature in °F, precipitation and evaporation in inches, and wind movement miles. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning with July 1948.

Amounts in Table 4 are from recording gages. Traces are not shown.

Amounts in Table 3 are from non-recording gages, unless otherwise indicated.

Data in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830 C

-	No record in Tables 3, 4, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. When hourly precipitation is miss or accumulated for several days, only the first and last days are shown in Table 4.
+	And also on a later date or dates.
*	Amount included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
6	Station not equipped with a recording gage. See Table 4 for 6-hourly measured amounts.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
SS	This entry in time of observation column in Station Index means observation made near sunset.

Subscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks, postal notes an money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Normals in use beginning with January 1951: State normals of temperature and precipitation are weighted averages based on the Division Normals. The weighting factors, based on ration of each Division's area to total area of the State, are: Eastern Division .232; Central Division .462; and Western Division .306.

TEXAS - FEBRUARY, 1951

E. A. Farrell, Section Director - Houston

WEATHER SUMMARY

The severe cold weather of the latter part of January extended into the first few days of February. Losses to vegetation, cattle, power lines, water mains, and automobile radiators were accentuated by another severe freeze and ice storm from the 13th to the 16th. Precipitation accompanying the latter freeze alleviated to some extent droughty conditions over some northern and central areas, but in the extreme south and southwest the severe drought continued at the end of the month. Temperatures averaged near normal for the month as a whole.

The severe freeze which started on January 29 and carried over into February was record breaking for duration in consecutive hours below freezing. Edinburg in the lower valley had 88 hours of continuous freezing weather, while Austin had 113 hours and Houston 114 hours. Temperatures in the lower valley averaged from 18 to 22 degrees. The coldest temperature in the State was 19° below zero at Dalhart on the 1st. Most stations recorded their monthly minimum temperature on the 1st or 2nd. After the 5th, temperatures rose to above normal, with dry weather prevailing. Near the middle of the month, the drought was relieved in the eastern third of the State, and effective rains continued in the northeast section during the last week, but the rest of the State remained dry. The highest temperatures were recorded at most stations from the 11th to the 13th, but the highest temperature in the State was 95° at McAllen and McCook, in the lower valley, on the 28th. The greatest monthly precipitation was 7.08 inches at Boxelder. The greatest daily precipitation was 2.58 inches at Mineola on the 19th.

Spring field work was starting in the eastern third of the State as soils dried. Mild cloudy weather held down evaporation and the light rains added further to moisture supplies in central, northern and eastern counties. Light rains in the northwest, High Plains, and western counties were beneficial, but additional moisture was needed there as well as in the dry southern areas. Corn planting started in south-central counties and cotton planting was underway on irrigated acreage in the Lower Valley. New feed has started over the eastern two-thirds of the State as the mild cloudy weather with adequate moisture was ideal for germination and early growth of clovers, rescue grass and weeds. In the south, far west, and northwest, additional moisture was needed in most areas to bring on new feed.

LOCAL STORMS

The ice storm of January 29th to February 4th extended from Tyler to Port Arthur, thence southwestward to Laredo. Extensive damage was done to trees, shrubs, and communication lines. Loss of electric power resulted in loss of heating facilities where thermostat controlled furnaces were depended upon. Heaviest damage was from Corpus Christi to Richmond and in the Tyler area. The ice storm of the 13th to the 15th extended from Eagle Pass northeastward to the Red River Valley. Although more extensive in area than the storm which started in January, less damage was experienced. The heaviest damage was from Huntsville to Paris. On the 19th, windstorms damaged buildings at Vernon, Wilbarger County, and at Mineral Well, Palo Pinto County, to the extent of $2,000 and $5,000, respectively. On the 20th, a wind storm at Denton, Denton County, blew over several garages and barns of light construction, causing damage estimated at $5,000.--CBC

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages --mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimatic Network stations were presented in bulletins (Hydrologic Bulletins) which were issued monthly for each of 8 drainage areas embracing the entire United States, but since the Network was established to meet the internal requirements of the Federal agencies referred to above, no provision was made for public dissemination of the data, distribution being limited to cooperating agencies and to certain public repositories. A list of locations where reference copies of the Hydrologic Bulletin Series are available for inspection may be obtained upon application to Chief, U. S. Weather Bureau, Washington 25, D. C.

Many other records published in this bulletin have been made available through the cooperation of various public offices, private agencies, and individuals as listed in the Station Index.

REFERENCE NOTES

he four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers ithin a state.

igures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

bservation times given in the Station Index are in local standard time.

elayed data and corrections will be carried only in the June and December issues of this bulletin.

onthly and seasonal snowfall for the preceding 12 months will be carried in the June issue of this bulletin.

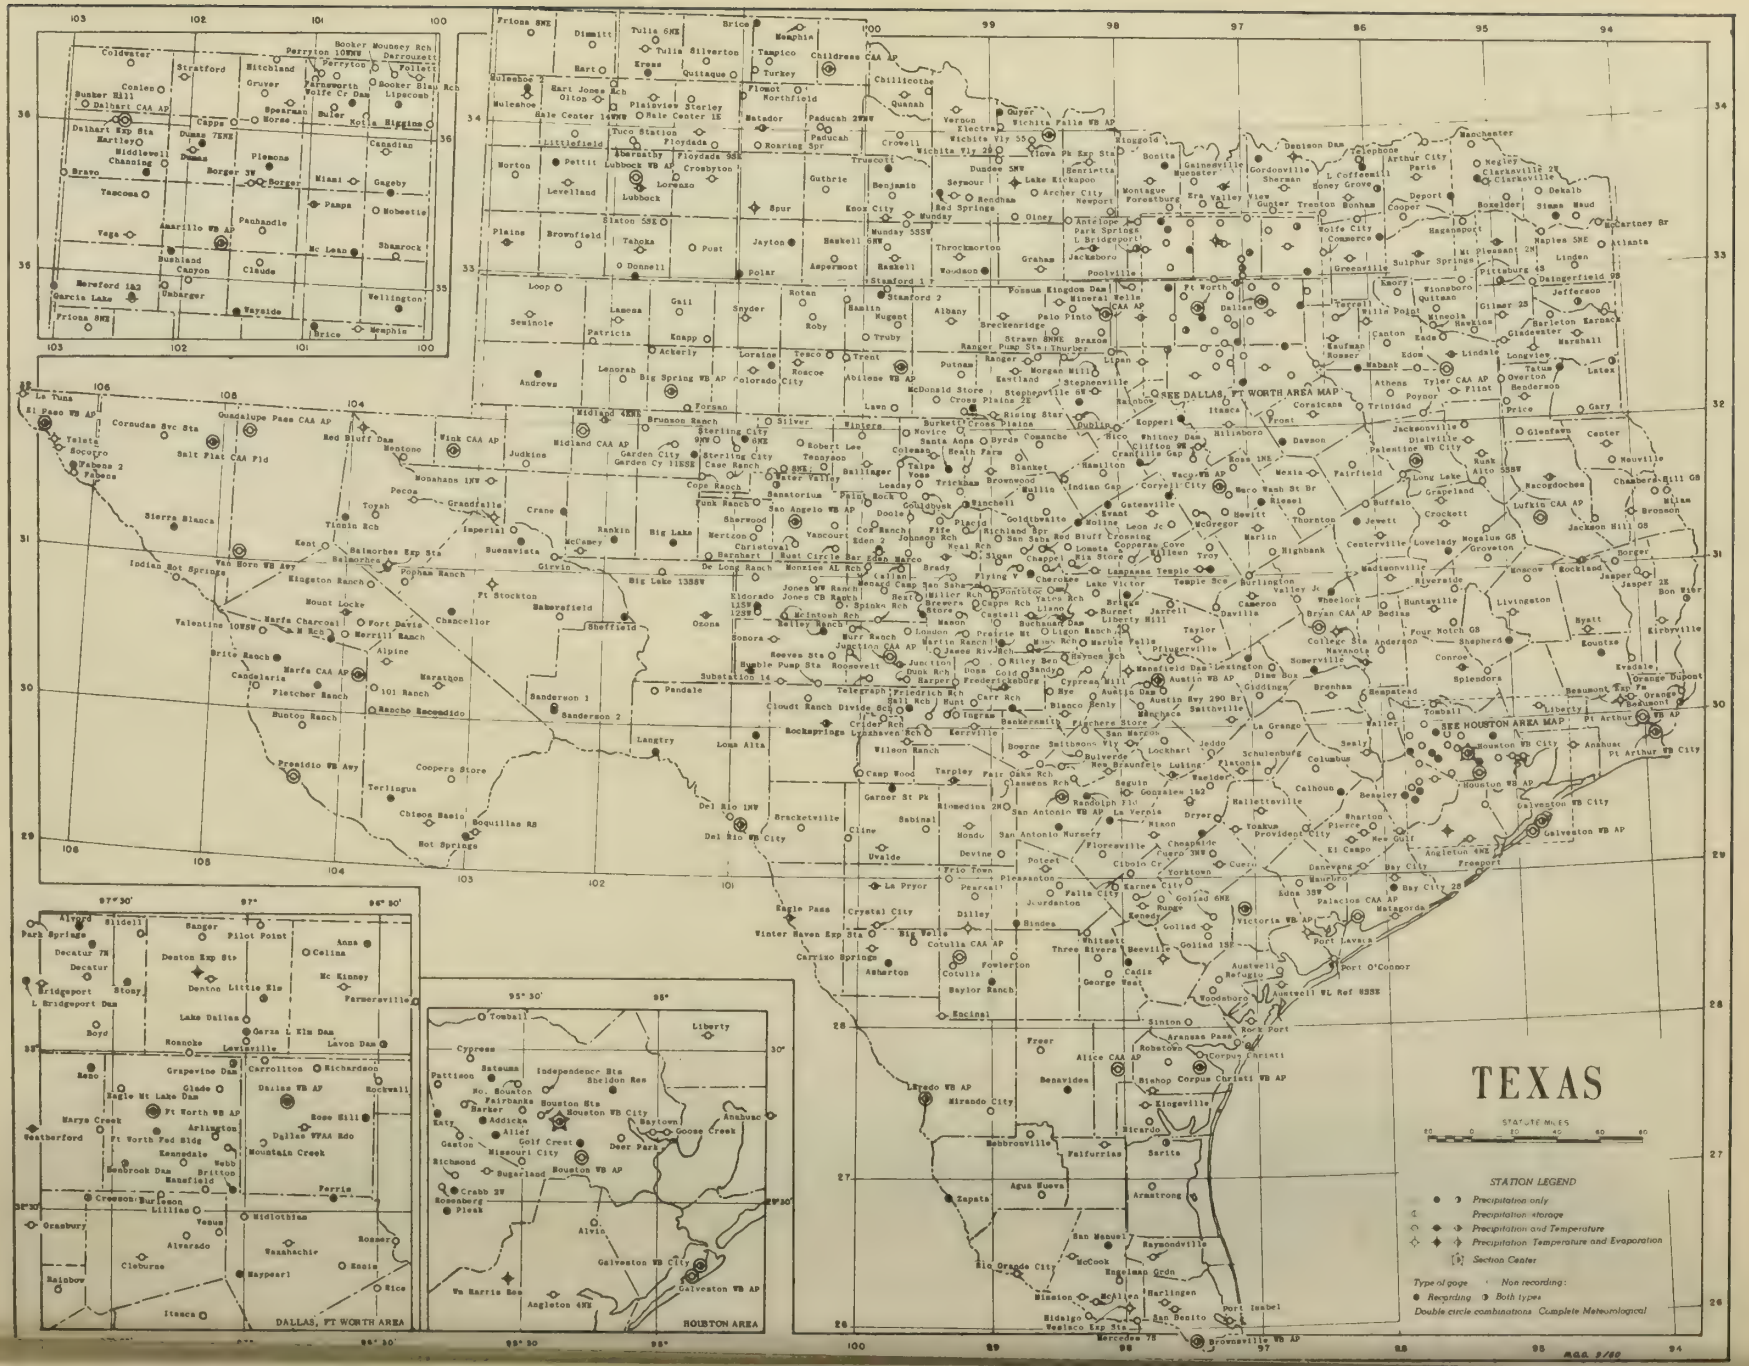
tations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

nless otherwise indicated, dimensional units used in this bulletin are: temperature in °F, precipitation and evaporation in inches, and wind movement in iles. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

leet and hail were included in snowfall averages in Table 1, beginning with July 1948.

mounts in Table 4 are from recording gages. Traces are not shown.

mounts in Table 3 are from non-recording gages, unless otherwise indicated.



ata in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

now on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830 CST.

-	No record in Tables 3, 4, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. When hourly precipitation is missing or accumulated for several days, only the first and last days are shown in Table 4.
+	And also on a later date or dates.
*	Amount included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
6	Station not equipped with a recording gage. See Table 4 for 6-hourly measured amounts.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
SS	This entry in time of observation column in Station Index means observation made near sunset.

ubscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks, postal notes and oney orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the uperintendent of Documents, Government Printing Office, Washington 25, D. C.

TEXAS - MARCH, 1951

E. A. Farrell, Section Director - Houston

WEATHER SUMMARY

Temperatures during March averaged below normal over the Panhandle and South Plains, but were mostly normal to above elsewhere. Beneficial rains occurred over the southern and extreme eastern portions of the State, aiding materially in alleviating droughty conditions previously prevailing.

Mild, open weather prevailed the first week with most stations recording their monthly maximum temperature on the 7th or 8th. Showers occurred in the northern portion of the State from the 8th to the 10th, and extended into the extreme southern portion on the 11th, accompanied with the passage of a cold front. The greatest precipitation in 24 hours in the State was 4.55 inches at Agua Nueva on the 11th. Freezing temperatures extended to Corpus Christi and Laredo on the 13th, when most stations recorded their lowert temperatures for the month. The lowest temperature in the State was 11° at Dalhart Experiment Station on the 13th. After a brief warm-up, a sharp change to cooler temperatures, accompanied with 1/4 to 1/2 inch rains in the northeast and coastal plains, occurred on the 17th and 18th. Mild, windy weather prevailed from the 20th to the 23rd with general dust storms in the north and west portions. The highest temperature in the State was 97° at Rio Grande City on the 23rd. Effective rains occurred in all sections from the 24th to the 28th as humid air moved upstate over thin cool air at ground level. The greatest precipitation for the month was 7.42 inches at Agua Nueva. Minor flooding occurred in the lower Sabine basin near the end of the month from heavy rains which fell over the middle and lower Sabine from the 26th to the 29th.

In most northern, central, and eastern counties, preparation of land and spring planting gained momentum. Spring vegetables, fruit, and early planted corn and cotton were damaged by freezing temperatures which occurred over much of the State on the 13th. Progress of commercial vegetables was seriously retarded and some damage occurred in early spring tender crop areas as the result of low temperatures. South Texas farmers' hopes for making a crop in 1951 skyrocketed following soaking rains over that drought-stricken area late in the month.

LOCAL STORMS

A hailstorm in San Antonio, Bexar County, on the 28th, damaged crops to the extent of $10,000. Hail stones were generally the size of moth balls with the heaviest hail in the southwest portion of the city. A tornado on the 28th was observed eight miles west of Crockett, Houston County, and left $1,300 damage to crops and $2,500 damage to property. The same storm was observed in Angelina County, but did not touch the ground.--CBC

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages --mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimati Network stations were presented in bulletins (Hydrologic Bulletins) whic were issued monthly for each of 8 drainage areas embracing the entire Unite States, but since the Network was established to meet the internal require ments of the Federal agencies referred to above, no provision was made fo public dissemination of the data, distribution being limited to cooperati agencies and to certain public repositories. A list of locations where ref erence copies of the Hydrologic Bulletin Series are available for inspectio may be obtained upon application to Chief, U. S. Weather Bureau, Washingto 25, D. C.

Many other records published in this bulletin have been made available throu the cooperation of various public offices, private agencies, and individua as listed in the Station Index.

REFERENCE NOTES

he four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers ithin a state.

igures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

bservation times given in the Station Index are in local standard time.

elayed data and corrections will be carried only in the June and December issues of this bulletin.

onthly and seasonal snowfall for the preceding 12 months will be carried in the June issue of this bulletin.

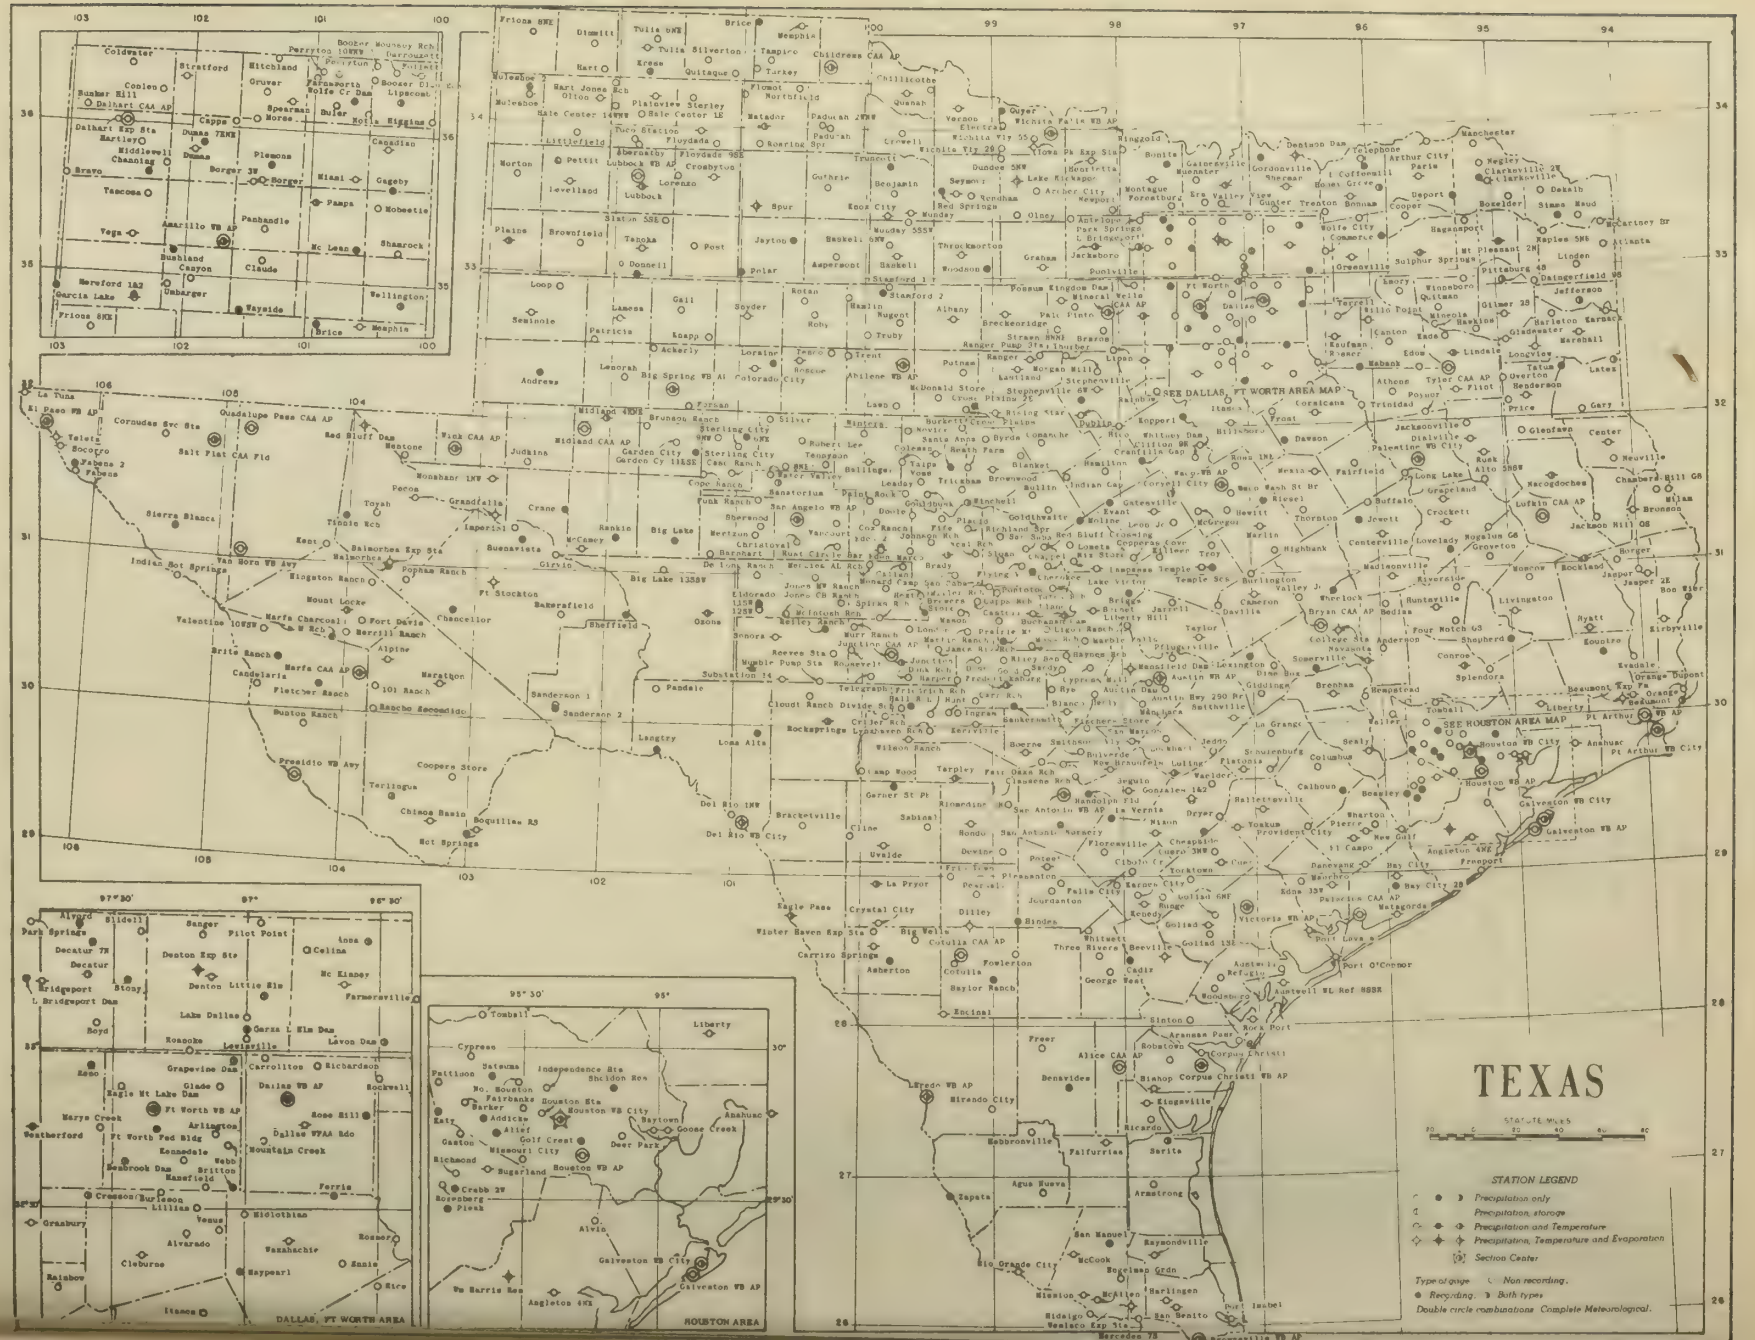
tations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

nless otherwise indicated, dimensional units used in this bulletin are: temperature in °F, precipitation and evaporation in inches, and wind movement in iles. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

leet and hail were included in snowfall averages in Table 1, beginning with July 1948.

mounts in Table 4 are from recording gages. Traces are not shown.

mounts in Table 3 are from non-recording gages, unless otherwise indicated.



ata in Tables 3, 5, 6, and snowfall data in Table 7 are for the 24 hours ending at time of observation. See the Station Index for observation time.

now on ground in Table 7 is at observation time for all except Weather Bureau and CAA stations. For these stations snow on ground values are at 1830 CST.

-	No record in Tables 3, 4, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. When hourly precipitation is missing or accumulated for several days, only the first and last days are shown in Table 4.
+	And also on a later date or dates.
*	Amount included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
6	Station not equipped with a recording gage. See Table 4 for 6-hourly measured amounts.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.
R	Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
SS	This entry in time of observation column in Station Index means observation made near sunset.

bscription Price: 15 cents per copy; monthly and annual, $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders ould be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent Documents, Government Printing Office, Washington 25, D. C.

CLIMATOLOGICAL DATA

TEXAS

APRIL 1951
Volume LVI No. 4

KANSAS CITY: 1951

TEXAS - APRIL 1951

E. A. Farrell, Section Director - Houston

WEATHER SUMMARY

Temperatures during April averaged slightly above normal in southwestern, west-central, and a few lower coast areas, but were mostly below normal elsewhere. Rainfall was deficient in all portions of the State, except the El Paso area, although occasional light rains during the month gave some relief from dry weather in most sections.

Minor flooding occurred in the lower Sabine Valley during the first week as a result of heavy rains which fell in the basin the latter part of March. Showers occurred in many areas the first week, although they were very light in the extreme southern sections. During the second week, showers were largely confined to the central and eastern areas. Daytime temperatures were moderate but nights were generally cool. The lowest temperature for the month was 20°, which occurred on the 11th at Mount Locke, Muleshoe, and Vega; however, most stations recorded their monthly minima on the 12th. This period was followed by a generally dry week with hot, windy weather prevailing in most sections. Most stations recorded their monthly maxima on the 19th or 20th. The last week was characterized as warm and humid with scattered showers. The greatest precipitation in 24 hours was 5.19 inches at Archer City on the 30th. The highest temperature in the state was 106° at Laredo on the 30th. The greatest monthly precipitation was 6.56 inches at Archer City.

Cultivation of growing crops in the south and continuation of planting in the north made fair progress during the week of generally open, windy weather. Scattered showers and rains were helpful, but additional moisture was needed in most areas. Strong winds have taken much of the available surface moisture and young row crops in south Texas were suffering. Growing wheat in the northern Blacklands made favorable response to the improved moisture condition, but the crop is late and stands are poor.

LOCAL STORMS

On the 1st, hailstorms occurred at Kaufman, Kaufman County, and at Clarksville, Red River County, leaving damage amounting to $40,000 with the principal damage to building roofs. Hail and wind damaged crops at Hallettsville, Lavaca County, on the 9th to the extent of $75,000. Some damage was also observed from the same storm in the southern half of Lavaca County, and in the adjoining counties of DeWitt and Gonzales. On the 20th, a tornado at Wichita Falls, Wichita County, left damage amounting to $8,000. It was accompanied by light hail. At Palestine, Anderson County, on the 29th, a hailstorm damaged crops valued at $75,000 and buildings amounting to $25,000. Hailstones were reported the size of hen eggs in Neches, Texas. Hail was piled 5 or 6 inches deep.--CBC

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages --mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimati Network stations were presented in bulletins (Hydrologic Bulletins) whic were issued monthly for each of 8 drainage areas embracing the entire Unite States, but since the Network was established to meet the internal require ments of the Federal agencies referred to above, no provision was made fo public dissemination of the data, distribution being limited to cooperatin agencies and to certain public repositories. A list of locations where ref erence copies of the Hydrologic Bulletin Series are available for inspectio may be obtained upon application to Chief, U. S. Weather Bureau, Washingto 25, D. C.

Many other records published in this bulletin have been made available throu the cooperation of various public offices, private agencies, and individual as listed in the Station Index.
